- Heat stable to 200°F
- Compostable, meeting international standard ISO 14851

Bagasse has proven to be the solution to hazardous chemical use and deforestation for the mass food service industry. These products are molded from pulp made from sugarcane stalk, called bagasse, an agricultural by-product. Absolutely no trees were harmed in the process. Our factories offer the best quality and the best pricing, which we pass along to you. We can also offer a limited range of unbleached bagasse products – which is the most environmentally benign option available! And of course, all these products are FDA approved and are compostable!
