

Bagasse has proven to be the solution to hazardous chemical use and deforestation for the mass food service industry. These products are molded from pulp made from sugarcane stalk, called bagasse, an agricultural by-product. Absolutely no trees were harmed in the process. Our factories offer the best quality and the best pricing, which we pass along to you. We can also offer a limited range of unbleached bagasse products – which is the most environmentally benign option available! And of course, all these products are FDA approved and are compostable!

## Our utensils are made from plant-based starch!

- 100% bio-based, non-GMO, made from annually renewable resources
- Heat stable to 220°F
- Compostable, meeting international standard ISO 14851

Presents  
**TrulyTree-Free  
Compostable  
EcoWare!**

& 100% Compostable  
**Utensils**

**Kick the Styrofoam  
Habit!**

Our EcoWare products are made with "paper" that is made from **100% sugarcane fibers-**

Bagasse. This material is an agricultural by-product from sugar mills. Our factory uses these materials to make disposable paper products.

You can easily **close the loop** of recycling, reusing and reducing by composting our products after use.

**Save money**

Our products are competitive in today's market - compare to Chinet™ & other leading brands

•

**Stop Landfill Growth**

Our products compost according to ISO standards

•

**Prevent pollution**

Saving trees means saving tons of greenhouse gas carbon dioxide from entering the environment!

•
